

Masats arrives in the USA

With the name Masats Ilc and headquartered in Calhoun, Georgia, Masats has founded its subsidiary in the United States.

The American market represents a new challenge for Masats after the company found it necessary to establish itself in the USA in order to comply with the Buy America Act (BAA). This norm states that in the case of public transportation operators that request federal subsidies to purchase vehicles, 60% of those products must be manufactured and assembled in the United States.

Masats Ilc. plans to manufacture aluminium doors and some of the mechanisms in the Calhoun plant, while the pneumatic systems will continue to be provided by Masats S.A. In the first phase, an annual demand of 600 vehicles and 1200 doors is expected.

The American market is interesting for Masats because of its relevant potential, but it is very demanding and its specifications are significantly different from other regions such as Europe, where there is virtually a single door supplier.

Hispacold launches a new range of electric climate systems

The new range of Hispacold electric acclimatising systems has a new design and significant improvements to its efficiency, ecology, weight and volume parameters.

Thanks to the modular design, the new electric acclimatising systems can adjust their configuration to customer specifications for optimal equipment operation and improved comfort inside the vehicles, adapting to the warmest or the coldest climates. They are characterised by their easy installation and maintenance, and

their small size combined with the materials used make them light systems.

The new devices include extraction devices for preserving air quality.

They also include the eCo3 air purifier, which cleans, disinfects and purifies the air inside the vehicle.
