

Irizar e-mobility signs an agreement with Ferrostaal Equipment for the markets of Germany, Austria and Switzerland

Ormaiztegui, 27th of November 2017

Irizar e-mobility and Ferrostaal Equipment Solutions have agreed to cooperate in the field of electric buses and charging infrastructure for the markets of Germany, Austria and Switzerland. The agreement stipulates that Ferrostaal Equipment Solutions is responsible for sales, project management and after sales for Irizar e-buses.

Irizar e-mobility and Ferrostaal Equipment Solutions provide their customers with a holistic concept for e-mobility. This starts with the route and line analysis and continues with the selection of the required vessel size, equipment, battery capacity and charging system including charging management. The product portfolio will be rounded off by additional intelligent financing products from MPC Capital, sister company of Ferrostaal Equipment Solutions, in order to cushion the one-off expenses for the purchase of electric vehicles.

The aim of the company is to offer the complete supply chain for electromobility in Germany, Austria and Switzerland as a turn-key solution. The bundling of strengths of both companies should make it easier for potential customers to introduce electric buses.

Irizar e-mobility already has more than 40 electric buses successfully in Spain, France and England in passenger service. Another 80 electric buses are on order. In addition to a 12-meter bus that can be delivered in different versions, there is also an 18-meter BRT bus, which is provided with a classic bus or tram design.

For the construction and further development of the electric buses, the Irizar Group has invested more than EUR 75 million, including a new production facility. As a result, capacities for the series production of electric buses are available. Irizar e-mobility combines important competencies in the field of mechanical engineering, electronics, energy management and connectivity for electric buses in its corporate group.

Irizar e-mobility belongs to the Irizar Group, a business group with an international presence, a leader in the passenger transportation sector and a benchmark in electric mobility, energy, electronics, connectivity and rotating machinery.

The Irizar Group is comprised of seven brands (Irizar, Irizar e-mobility, Alconza, Datik, Hispacold, Masats and Jema) that have production operations in 13 production plants in addition to their own R&D centre whose purpose is applied research and technological development of products and systems for the Group.

It is a well-established group made up of more than 3000 people with a commercial presence in more than 90 countries on 5 continents and billing in excess of 600 million euros.

Established in 1889, today Irizar is a solid Group that is geographically and industrially diversified and in continuous growth.

Ferrostaal Equipment Solutions is part of the Ferrostaal Trading Group, a global industrial services and trading company.
